

How to Clean a Car

Do you want to help make the family car shiny and clean? Follow these fun steps!

What you will need:

- Car soap
- Buckets
- Sponges
- Hose
- Towels
- Polish

What you do:

Before you begin, make sure the car is parked in a shady spot so the soap doesn't dry too fast.

Firstly, spray water all over the car using the hose to wash off the dirt.

Then, fill one bucket with soapy water and another with clean water.

After you have prepared the buckets, dip a sponge in the soapy water and wash the car in parts, starting from the top. Make sure you clean the tyres and the windows, too!

Once you have scrubbed the car, spray it with the hose to rinse off the soap.

Carefully, dry the car with a cloth so there are no water spots.

Finally, drip some polish onto the car and use a fresh cloth to polish it up until it is shiny.

A final note of warning:

Always remember to use gentle soap to protect the paintwork.
