

Plants

Key Knowledge Fact Sheet Year 3

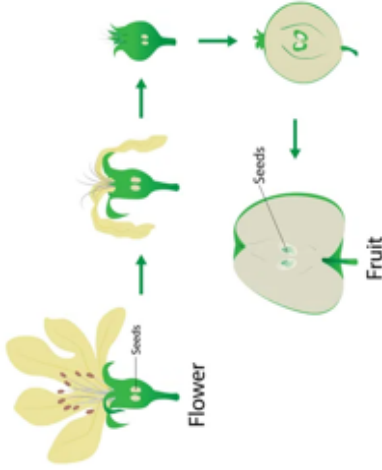

Pollination

Pollination occurs when insects or air, transfer pollen from a female plant to a male plant.

Seed formation

Seed formation occurs when the pollen travels down the flower to the female part of the plant.

Seed dispersal - when seeds are spread over an area. They could be dispersed by wind, water, explosion or animals.

ragwort

coconut

peas

apple

Plants have different features which all serve a specific function.
